EZ-Twist™ Refillable Odor Controller

SUGGESTED APPLICATIONS

- ◆ Restrooms
- ◆ Hotel Rooms
- ◆ Litter Box/Pet Areas
- ◆ Storage Containers/Luggage
- ◆ Kitchens
- ◆ Offices
- ◆ Vehicles
- ◆ Student Dorms
- ◆ Dressing Rooms
- ◆ Boats
- ◆ Utility closets

PURPOSE

The easy-to-use, disk-shaped EZ-Twist is a deodorizing device that utilizes a special non-woven fiber element to release an effective neutralizing dry vapor into the air. One disk treats 2,000 ft³. As a passive system, the EZ-Twist requires no electricity or batteries—it relies on gentle air movement passing over the neutralizing element to constantly refresh the air. The EZ-Twist system eliminates the potential for dangerous spills and wet spots on floors, and contains no petroleum distillates, inert ingredients, or ozone-depleting chemicals.

DETAILS & USAGE

Compact, durable, and lightweight housing. Refillable EZ-Disks last up to 30 days and are sold separately. EZ-Disks are spill-proof, nontoxic, and biodegradable. To replace the EZ-Disk, hold the EZ-Twist housing with the bottom of plastic case in one hand and the top in the other. Twist unit while pulling apart until the two pieces release. Open protective bag containing the EZ-Disk by tearing at notch. Install EZ-Disk on pin in the center of the EZ-Twist housing. Do not allow the EZ-Disk to come into contact with any surfaces other than the housing as contact may damage certain surfaces. Snap the top and bottom of the EZ-Twist housing together. Remove paper backing from Velcro strip on back of case. Position unit in desired application spot and press hard. Apply to hard, smooth surfaces for best results. Adjust the uniquely designed air vents by twisting to open or close for precisely controlled vapor output. Wash hands with soap and water to remove any residue from handling EZ-Disk. Both EZ-Twist housings and EZ-Disks are sold by the dozen. For best results, store EZ-Disks in a cool, dry location and keep away from extreme heat. Dry vapor output will be affected by humidity, airflow, and temperature. Ideal dry vapor release occurs at 50-80°F. Vapor release significantly increases in excess of 90°F. The passive system does *not* create moisture or ozone, and will not harm fabric, plants, rubber, adhesives, electrical components, or remove pigment from leather. Vaportek products use natural essential oils. If an allergic reaction occurs, please discontinue use immediately.

Approx. Dimensions of housing:
3.5"W x 1"H. Weight: less than 1 lb.
